

Tameenak

Unified Insurance App Design

A design concept that brings insurance companies and their products together in one mobile app.

About this report

This report presents Tameenak as a design project. It is based on 19 screenshots of a Figma prototype. The app has not been developed, launched, or tested with users, and the report does not claim otherwise.

How assumptions are marked

Statements that go beyond what the screens show are labelled **Assumption**. Screen numbers refer to the walkthrough in section 6. Section 9 draws on published sources, listed on the last page.

SECTION 01

Project overview

What Tameenak is

Tameenak is a mobile app design that brings multiple insurance companies and their products together in one place. It exists as a Figma prototype. Nothing in this report describes a built, launched, or user-tested product.

In the prototype, a user creates an account, browses the types of insurance on offer, fills in one form to request a quote, and sees plans from several providers. They can compare two providers side by side, choose a plan, add optional cover, pay by card, and later find the order and its policy document in the app.

The problem it aims to address

The design starts from a working premise: arranging insurance usually means dealing with each provider separately, repeating the same details, and trying to weigh plans that are described in different ways. Tameenak puts that work into a single flow.

The onboarding screens state the intent in the app's own words: "Save time and money with instant quotes from top insurers" and "Compare insurance policies in real time."

Assumption. This premise is the starting assumption of the project. No research measuring the problem is included in this report.

Screen 8. The Tameenak home screen from the Figma prototype.

providers shown

3

plan tiers per provider

Counts are taken from the screenshots. Only the car insurance flow is designed from start to finish.

SECTION 02

Project objectives

The objectives below describe the value the design intends to give users by bringing insurance providers and services together. They are read from the screens and are design intentions, not measured results.

1

One place for many insurers

Let a user see several insurance companies and their products in a single app, without visiting each provider separately.

[Screens 9, 11](#)

2

Enter details once

Collect the vehicle details in one quote form, then show offers from several providers.

Assumption: the same answers are used for every provider.

[Screens 10, 11](#)

3

Make plans comparable

Describe every plan with the same attributes (coverage, agency repair, roadside assistance, car replacement, and price) so that two providers can be placed side by side.

[Screens 12, 14](#)

4

Show the full price before paying

Break the cost into base price, service fee, and optional add-ons, and show the total next to the Buy now button.

[Screen 15](#)

5

Finish the purchase in the app

Keep plan selection, payment, and confirmation in one continuous flow.

[Screens 15–17](#)

6

Keep policies within reach

Give the user a place to check order status and open the policy document after purchase.

[Screens 18, 19](#)

SECTION 03

Target users and needs

Assumption. This report does not include user research. The user groups and needs on this page are inferred from the prototype screens only.

Where the design appears to be aimed

The screens point to users in Bahrain. Sign-up asks for a CPR number (Bahrain's personal identification number), the sample phone number uses the +973 country code, prices are shown in BD, and two of the four providers carry Bahrain in their name.

Likely users and their needs

LIKELY USER (ASSUMED)	WHAT THE SCREENS SHOW	LIKELY NEED (ASSUMED)
Car owners arranging motor insurance	The only complete flow is car insurance. The quote form asks for registration month and insurance start date.	Get a quote quickly, see several providers at once, and finish without visiting each insurer.
Price-conscious drivers	Provider cards show a "Starts from" price. The Flexi plan is labelled "Best for: Budget-conscious drivers or old cars."	Find the lowest price and understand what the cheaper plan leaves out.
Drivers who want fuller protection	Gold and Platinum plans are labelled "Balanced Protection" and "Full Protection." Three paid add-ons are offered.	See what each higher tier adds and what each extra costs.
People looking for other kinds of cover	Seven categories are listed, including health, travel, property, life and family, business, and gadget insurance.	One starting point for different insurance needs. These flows are not yet designed.
Existing policyholders	The Orders tab shows Pending and Active policies. A policy screen offers a Download button.	Check the status of a purchase and retrieve the policy document when needed.

SECTION 04

Main features

Tameenak is a platform for insurance companies and their products. Plan comparison is one of its features, alongside quoting, purchase, and policy access.

1

Onboarding and account creation

Two intro screens explain the app. Sign-up collects CPR, name, email, phone number, and password, followed by a one-time password check.

[Screens 3–7](#)

2

Exploring insurance types

The home screen highlights car, health, and travel insurance. A full list shows seven categories.

[Screens 8, 9](#)

3

Requesting a quote

A car insurance form gathers nine details about the vehicle and the cover start date.

[Screen 10](#)

4

Viewing providers and plans

Four providers are listed with plan types, add-on availability, and a starting price. Each provider offers Flexi, Gold, and Platinum plans.

[Screens 11, 12](#)

5

Comparing plans

Two providers can be viewed in two columns, tier by tier, with tick and cross icons for what is included.

[Screens 13, 14](#)

6

Selecting coverage and add-ons

A plan page lists what is covered, the base price, and the service fee. Three optional services can be ticked.

[Screen 15](#)

7

Purchasing a policy

A card payment screen repeats the total. A confirmation screen follows with a link to the order.

[Screens 16, 17](#)

8

Tracking orders

The Orders tab lists each policy with provider, plan, car, dates, and a Pending or Active status.

[Screen 18](#)

9

Accessing insurance documents

A policy screen previews the document and offers a Download button.

[Screen 19](#)

The home screen also shows notification, profile, and support icons. Their destination screens are not part of the screenshots, so they are not described as features here.

SECTION 05

User journey

The journey below follows the order of the screens, from first opening the app to holding a policy. Each step is backed by a screenshot.

Assumed links between screens. The screenshots are static, so some links between screens are assumed from button labels and screen order:

- The Policies tab opens the Select an Insurance Type screen.
- Tapping a plan card, on the plan list or the comparison, opens the plan details screen.
- Change on the comparison screen swaps the second provider.
- Tapping an Active order opens its policy document.

Left out of the journey. Log in appears as a button on the Get Started screen, but no log-in screen is included, so it is left out of the journey. The same applies to the health, travel, and other insurance flows.

SECTION 06

Screen-by-screen walkthrough

The 19 screens are shown in the order a user would meet them. Each caption gives the screen number, the journey stage, and the purpose of the screen.

SCREEN 01 · Stage 1: Onboarding

App icon on the home screen

The Tameenak icon sits on an iPhone home screen among standard apps. It shows where the journey starts and introduces the shield logo.

SCREEN 02 · Stage 1: Onboarding

Splash screen

A white screen with the Tameenak shield logo in the center. It gives the app a short branded opening before onboarding begins.

SCREEN 03 · Stage 1: Onboarding

Onboarding: instant quotes

The first intro screen. A clock illustration sits above the message "Save time and money with instant quotes from top insurers," with a Continue button and a three-step progress indicator.

SECTION 06 · CONTINUED

Screen-by-screen walkthrough

SCREEN 04 · Stage 1: Onboarding

Onboarding: compare policies

The second intro screen reads "Compare insurance policies in real time." The layout matches the previous screen. Only the message and the progress indicator change.

SCREEN 05 · Stage 1: Onboarding

Get Started

The last onboarding step, on a soft blue gradient. Two equal buttons offer Sign up or Log in.

SCREEN 06 · Stage 2: Account

Create Account

Six fields collect CPR, name, email, phone number, password, and password confirmation. The Sign up button sits at the bottom of the screen.

SECTION 06 · CONTINUED

Screen-by-screen walkthrough

2 Account

3 Insurance type

4 Quote and plan

5 Purchase

6 Policy

SCREEN 07 · Stage 2: Account

Verify number

The user is asked to enter the one-time password sent to their phone. The screen shows a sample number, four code boxes, and a Verify button.

SCREEN 08 · Stage 3: Insurance type

Home

Greets the user by name and shows notification, profile, and support icons. Three cards promote car, health, and travel insurance, each with an Explore Now button. A bottom bar links to Home, Policies, and Orders.

SCREEN 09 · Stage 3: Insurance type

Select an Insurance Type

A grid of seven categories: car, health, travel, property, life and family, business, and gadget and electronic insurance. Each has a matching line icon.

Assumption: this screen opens from the Policies tab.

SCREEN 10 · Stage 4: Quote and plan
Car insurance quote form

"Get your car insurance quote."

Nine fields collect the make, model, manufacturing year, vehicle value, chassis number, plate type and number, registration month, and insurance start date.

9:41

Choose your insurance company:

Gulf Insurance Group
Plan types: Flexi, Gold & Platinum
Add-ons Available
Starts from: 50BD

Solidarity Bahrain
Plan types: Flexi, Gold & Platinum
Add-ons Available
Starts from: 55BD

Bahrain National Insurance
Plan types: Flexi, Gold & Platinum
Add-ons Available
Starts from: 60BD

Arabia Insurance Company
Plan types: Flexi, Gold & Platinum
Add-ons Available
Starts from: 70BD

SCREEN 11 · Stage 4: Quote and plan
Choose your insurance company

Four providers are listed: Gulf Insurance Group, Solidarity Bahrain, Bahrain National Insurance, and Arabia Insurance Company. Each card shows plan types, add-on availability, and a starting price from 50 BD to 70 BD.

9:41

Solidarity Bahrain

Flexi
Coverage: Third-Party only
Agency Repair: Not Included
Extras: No Add-ons
Best for: Budget-conscious drivers or old cars
Price: 55BD

Gold
Coverage: Comprehensive
Agency Repair: Included
Extras: Road Assistance
Best for: Balanced Protection
Price: 99BD

Platinum
Coverage: Comprehensive
Agency Repair: Included
Extras: Road assistance, Car replacement
Best for: Full Protection
Price: 130BD

Compare

SCREEN 12 · Stage 4: Quote and plan
Provider plans

Solidarity Bahrain's three plans. Each card gives coverage, agency repair, extras, who the plan suits, and the price: Flexi 55 BD, Gold 99 BD, Platinum 130 BD. A Compare button sits below.

SECTION 06 · CONTINUED

Screen-by-screen walkthrough

SCREEN 13 · Stage 4: Quote and plan

Choose a company to compare with

The provider list appears again so the user can pick a second company. Solidarity Bahrain, already selected, is greyed out.

SCREEN 14 · Stage 4: Quote and plan

Side-by-side comparison

Solidarity Bahrain and Gulf Insurance Group are shown in two columns. Each tier shows coverage, agency repair, roadside assistance, car replacement, and price, with tick and cross icons. A Change button sits at the bottom.

SCREEN 15 · Stage 5: Purchase

Plan details and add-ons

The Solidarity Bahrain Gold plan: coverage, inclusions, one-year duration, base price 99 BD, and service fee 7 BD. Three add-ons can be ticked: Car Replacement (+25 BD), Personal Accident Cover (+20 BD), and Natural Perils (+30 BD). Total: 106 BD.

SECTION 06 · CONTINUED

Screen-by-screen walkthrough

1 Onboarding

2 Account

3 Insurance type

4 Quote and plan

5 Purchase

6 Policy

SCREEN 16 · Stage 5: Purchase

Payment

"Payment Gateway" repeats the 106 BD total and offers payment by card, with Visa and Mastercard logos and fields for card number, name on card, expiry, and CVV.

A mock-up only. No payment is processed.

SCREEN 17 · Stage 5: Purchase

Confirmation

"Request successful," with a note that the user will be notified once the document is ready. The user can tap View Order or Done.

SCREEN 18 · Stage 6: Policy

Orders

Policies appear as cards with the provider logo, plan type, car, plate number, and start and end dates. A status label marks one order as Pending and another as Active.

SECTION 06 · CONTINUED

Screen-by-screen walkthrough

1 Onboarding

2 Account

3 Insurance type

4 Quote and plan

5 Purchase

6 Policy

Not shown in the prototype screenshots

The walkthrough covers all 19 screens. These parts of the app are referred to in the design but have no screens yet:

- Log in, password reset, and profile screens
- Notification and support screens
- Quote and plan flows for health, travel, property, life and family, business, and gadget insurance
- Error, empty, and loading states
- Renewal, cancellation, and claims

SCREEN 19 · Stage 6: Policy

Policy document

Titled "Toyota, Camry Car Insurance," the screen previews the policy document and offers a Download button.

The document image is a placeholder. See section 8.

SECTION 07

Design and user experience

This section describes how the prototype handles navigation, visual hierarchy, color, consistency, and readability, based on the 19 screens.

Navigation

- The purchase path is linear, with one clear primary button on each screen: Continue, Verify, Buy now, Pay, Done.
- A three-item bottom bar keeps Home, Policies, and Orders within reach. The raised center button draws attention to Policies.
- The onboarding screens show a three-step progress indicator, and the confirmation screen links straight to the order.

Visual hierarchy

- Large bold headings state the purpose of each screen.
- Primary actions are large blue buttons placed at the bottom, in the same position from screen to screen.
- Cards group related information for providers, plans, and orders. On the payment screen the total is the largest element.

Color use

- One strong blue is used for buttons, icons, and the logo on a white background. The result is clean and recognizable.
- Each plan tier has its own color (grey for Flexi, tan for Gold, teal for Platinum), repeated on the plan list, comparison, and details screens.
- Green ticks and red crosses make the comparison quick to scan, and order status is color-coded as Pending or Active.

Consistency

- Card style, button shape, and the line-icon family stay the same across screens.
- The provider list layout is reused for the comparison picker, so the second screen needs no explanation.
- Prices agree across screens. Each provider's "Starts from" price matches its Flexi price, and the 106 BD total (99 BD plus a 7 BD fee) carries through to payment.

Readability

- Labels are short and written in plain language.
- The onboarding, verification, payment, and confirmation screens use generous white space.
- Form fields are evenly spaced, with dropdown arrows marking the fields that offer a list.
- A bold condensed typeface gives headings and buttons a distinct, consistent voice.

SECTION 08

Prototype scope and limitations

This report is based only on screenshots of a Figma prototype. It describes what the design shows and how it is intended to work. It does not describe a working product.

A design, not a working app

Tameenak is a Figma prototype. It has not been developed into a working app, launched, or tested with users. Account creation, OTP verification, quotes, payment, notifications, policy issuance, and document download are screen designs only.

Sample content

The user name, phone number, vehicles, plan details, add-ons, and prices are placeholder content. They have not been checked against real insurance products.

Real company names and logos

Four insurers appear in the prototype by name and logo for illustration. This does not indicate a partnership, an agreement, or a live integration.

One flow designed end to end

Only car insurance runs from quote to policy. The other six insurance types appear as entry points. Log in, profile, notifications, support, and error states are not shown.

Placeholder policy document

The document on the policy screen is a sample image used to show where a policy would appear. It is not a policy issued through Tameenak or by the providers shown.

Assumed interactions

This report is written from static screenshots. Where it describes what a button does, that is inferred from the button's label and the order of the screens.

SECTION 09

Conclusion and path to launch

Tameenak presents a clear idea: one app in which a user can find several insurance companies and their products, get a quote, choose and pay for a plan, and keep the policy afterwards. The prototype carries that idea through a complete car insurance journey in 19 screens, with a consistent visual style and a simple, linear flow.

The prototype shows how the experience would look and work. Turning it into a live service depends on what sits behind the screens: a licence, agreements with insurers, and the systems that produce quotes, take payments, and issue policies. The rest of this section sets out those requirements.

A possible sequence

Assumption: this order is one reasonable route from prototype to launch. It is not a fixed plan or timeline.

Why car insurance first. Third-party liability insurance is the minimum legal requirement for registered vehicles in Bahrain. This makes car insurance, the flow already designed in the prototype, a logical first product for launch.

SECTION 09 · CONTINUED

Conclusion and path to launch

Regulation and licensing

Insurance is a regulated activity in Bahrain. The Central Bank of Bahrain (CBB) states that no person may undertake a regulated service in the Kingdom unless licensed by the CBB.

A platform that gathers quotes from several insurers and shows them in one place matches what the CBB Rulebook calls an insurance aggregator. Module IA of Rulebook Volume 3 (Insurance) covers these firms. It describes them as licensed insurance brokers that provide their services through an online platform.

CBB RULE	WHAT IT REQUIRES	WHAT IT MEANS FOR TAMEENAK
IA-A.1.1, IA-B.1.1	Insurance aggregators hold an insurance broker's licence that covers aggregator services.	Tameenak, or the firm that operates it, would need this licence before offering quotes.
IA-2.2.2	A written agreement with each insurance firm before proposals are sent to it.	Needed with every insurer listed in the app, such as the four shown on screen 11.
IA-2.3.2	Product comparisons must be authentic and based on information from the insurance firms. Ratings, rankings, endorsements, and bestsellers may not be shown.	Plan details and prices on screens 11 to 15 would come directly from the insurers.
IA-2.3.2, IA-2.4.1	Products must be identified as Takaful or conventional insurance.	Applies to the provider and plan screens.
IA-2.4.1	Clients must be told that their details may be shared with insurers, and the firm must identify itself as licensed by the CBB as an Insurance Broker – Insurance Aggregator.	Applies to sign-up, the quote form, and the home screen.
IA-1.1.6	An up-to-date security policy covering technology architecture, logical and physical security, payment processes, and cyber security.	Applies to accounts, the quote form, and payment (screens 6, 10, and 16).
IA-B.1.3	Aggregators that handle client money must safeguard it under the Client Money module (Module CL).	Applies if premiums are paid through Tameenak, as on screen 16.

This is a planning summary, not legal advice. Module IA is dated August 2019 and rules can change, so the current requirements would need to be confirmed with the CBB before any launch.

SECTION 09 · CONTINUED

Conclusion and path to launch

Other factors for launch

Agreements with insurers

Each insurer would need to agree to supply product details and prices, to the terms for fees or commission, to the use of its name and logo, and to how a policy is issued and delivered once the customer pays.

Data protection

Tameenak would collect CPR numbers, contact details, vehicle details, and card details. Bahrain's Personal Data Protection Law (Law No. 30 of 2018) sets conditions for processing personal data, including consent and security measures, and is enforced by the Personal Data Protection Authority.

Identity and onboarding

The sign-up screens collect a CPR number and verify a phone number. A live service would need a way to confirm that these details are genuine, in line with the CBB's financial crime rules for licensees.

Payments

The payment screen shows card payment. Accepting cards requires a licensed payment provider and compliance with card data security standards. Client money rules apply where premiums pass through the platform.

Technology

The screens would need to be built as a mobile app with a backend for accounts, quotes, orders, notifications, and document storage, connected to each insurer's systems.

Operations

A live service needs customer support, a complaints process, and a clear handover to the insurer for claims, renewals, and cancellations. Module IA asks for a board-approved policy that includes a grievance redress mechanism.

Business model

The plan details screen shows a 7 BD service fee on a 99 BD plan. **Assumption:** revenue would come from a service fee per policy. Whether income comes from fees, insurer commission, or both would need to be decided and disclosed to customers.

App distribution

Apple's App Store guidelines state that insurance apps must be free, must comply with the law where they are distributed, and cannot use in-app purchase. Apps in highly regulated fields are expected to be submitted by the legal entity that provides the service.
